

Two-Factor Authentication

The next generation of access security from Duo Security

Abacus Private Cloud™ uses the leader in Two-Factor Authentication, Duo Security, to provide an additional layer of security, keeping your Abacus Private Cloud environment secure even if your password is compromised. You'll be alerted right away (on your smart phone) if someone is trying to log in as you.

What is Two-Factor Authentication?

Two-factor authentication adds an additional layer of security to your APC environment. Verifying your identity using a **second factor** (such as your smart phone) prevents anyone but you from logging in, even if they know your password.

How It Works?

You'll log in as usual to your APC environment, with your username and password, and then use your smart phone to verify your identity through the Duo Mobile Push app.

Duo Mobile Push App

With the Duo Mobile Push app, you'll get a login request sent to your phone — just press **Approve** to authenticate. If you get a login request that you weren't expecting, press **Deny** to reject the request. You'll be given the ability to report it as fraudulent, or you can tap **It was a mistake** to deny the request without reporting it.
