- ✓ System Administration of 3rd Party Apps

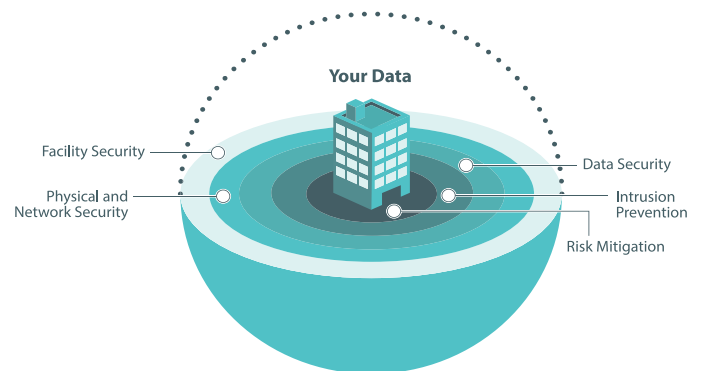

Unlike Public Clouds or SaaS platforms, Abacus Private Cloud (APC) is built exclusively to run technology in a fully integrated, secure and managed environment. Instead of offering cookie-cutter technology products & services, APC is a comprehensive turn-key solution that caters to specific business applications, technology, and budgetary requirements.

Abacus Private Cloud can take any local IT infrastructure, desktop software application, SaaS application and data and weave it into a fully integrated, virtual workplace, which is accessible remotely from any device, anytime. All of this is supported 24x7 in state-of-the-art data centers located exclusively in the US.

Full-Spectrum Security

Robust security and compliance policies, such as two-factor authentication, five tiers of physical, network and data security, information handling and data privacy protocols in accordance with NIST standards and geographically redundant, SSAE 16-compliant, SOC 1-, 2- data centers ensures a secure and compliant environment for our clients.
